EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Peter Stecher (Reg. Num. 47,259) on 2/25/2005.

2. The following changes to the drawings have been approved by the examiner and agreed upon by applicant: In figure 3, the reference number "28" on the left-hand side of the figure should be changed to a "40". In order to avoid abandonment of the application, applicant must make these above agreed upon drawing changes.

Drawings

3. The drawings were received on 12/15/2004. These drawings are accepted by the examiner.

Specification

4. The amendments to the specification are accepted by the examiner.

Allowable Subject Matter

5. Claims 1-16 are allowed.
6. The following is an examiner's statement of reasons for allowance: Claims 1-16 are allowable over the prior art of record because the latter, either alone or in combination, does not disclose nor render obvious a waveguide-semiconductor device comprising a waveguide structure with a multimode interferometer structure that minimizes the reflections of TE modes

Art Unit: 2883

and a mesa structure that is coupled to the waveguide structure that minimizes the reflections of TM modes in combination with the rest of the claimed limitations.

7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. *Shimonaka et al (US 2002/0154848 A1)* teach a waveguide-semiconductor coupling device. The device includes a waveguide structure with a multi-mode interference region coupled to a mesa structure. Shimonaka et al teach that the MMI region and the mesa structure confine light in a transverse direction but do not specifically teach that the multi-mode interference region minimizes reflections of the TE modes or that the mesa structure minimizes reflections of the TM modes.
